Life On Other Planets

There were more than four thousand, eight hundred and forty UFO sightings in the year 2008. Most people believe there is life on other planets, and know there is some sort of proof. In the year 2006 pilots, and crew members saw a flying disc around the Chicago O'Hare airport. There have been many more sightings of UFO's around the world, but UFO's aren't the only proof we have had. In 1996 scientists discovered as what they call fossils in a meteorite, and many times we have had strange radio signals.

"UFOs exist, the proof is undeniable. Thousands of people make reports yearly of strange lights performing impossible maneuvers that traditional earth-bound aircraft, commercial, military, etc; could never accomplish. While most of the world's governments try to deny the reality of their existence, they blame the sightings on natural aerial phenomenon, the planet Venus, swamp gas, weather balloons or mass hysteria. There is one ultimate truth that the world is afraid to accept...the reality that we are not alone in the universe, the proof is here, the proof is real, seek out the truth...Aliens the Truth." (<http://www.alienshethetruth.com/>)

From all the UFO sightings, to the fossils, and the radio signals, scientists are betting we will make contact with the "aliens" by the year 2025, but they are not yet positive. A question wondered many times is "Could they be a species we know of?" The answer is not available to say for sure, but since there are many other planets like planet Earth, it could be possible.

If there was life on other planets, they could be able to live in our galaxy. We do not have enough proof, knowing we hardly know anything about our own galaxy. Scientists say there could be life on the moon,

finding footprints that are not from us. They are not sure what to think, but are still working on the proof.

At this moment in time, we are not quite sure if what we call aliens even exist. For all we know the UFO sightings could be new government inventions that have not been able to be spoken. They either could, or could not exist. Someday we will be able to get out of all this confusion, and know the answer to all these questions.
